Dharan

Subject: Proposal for Adoption of Claude AI Enterprise to Strengthen Academic and Administrative Capacity

Respected Sir,

I am pleased to submit this proposal for the adoption of Claude AI Enterprise, an advanced AI assistant developed by Anthropic, as a strategic capability for Purwanchal Campus, Dharan. Claude is currently trusted by approximately 70% of the Fortune 100 companies and is one of the fastest-growing platforms in the education and library sector worldwide. This proposal focuses on what Claude can do for our faculty, students and administration — the productivity, quality and capability gains it brings to a busy campus.

1. Core Capabilities of Claude AI Enterprise

Claude Enterprise is not a basic chatbot. It is a professional-grade AI workspace built specifically for organisations such as ours, with the following core capabilities:

- Long-document intelligence: a 200,000-token context window allowing Claude to read and reason over entire textbooks, syllabi, annual reports, audit files and policy documents in a single session.
- Advanced reasoning and writing: produces formal letters, notices, circulars, lesson plans, question papers, model answers and research summaries at near-professional quality in seconds.
- Bilingual English–Nepali support: drafts, translates and proofreads documents in both languages, useful for parent, ward and government correspondence.

- Code and spreadsheet assistance: writes formulas, scripts and small programs, and assists the IT cell with Google Workspace, Cloudflare and routine system administration tasks.
- Data analysis: cleans, summarises and interprets results from Excel sheets, exam records, fee data and survey responses — without requiring advanced data-science skills.
- Integrated workflows: connects with Microsoft 365, Google Workspace, PDF documents and Excel, so staff can work inside the tools they already use.
- Memory and Projects: stores institutional context (policies, calendars, formats) so each user gets answers tailored to our campus, not generic responses.

2. Key Features That Directly Benefit Our Campus

- Faculty support: instant generation of lesson plans, lecture notes, MCQs, subjective questions, marking schemes and revision material aligned to the curriculum.
- Administrative speed: drafting of notices, circulars, meeting minutes, reports, official letters and email replies reduced from hours to minutes.
- Examination cell: question-paper drafting, moderation support, result analysis and detection of patterns in student performance.
- Research and project guidance: literature summarisation, paraphrasing support, reference formatting and structured guidance for student dissertations and faculty research.
- Student services: 24×7 AI-assisted help for academic queries, career guidance, and writing improvement, accessible through licensed staff accounts.
- Library and knowledge management: rapid summarisation of long reports, journal articles and government circulars; easy creation of internal knowledge bases.
- Multilingual content: smooth translation and tone adjustment between English and Nepali for official and public-facing communication.

3. Enterprise-Grade Security and Governance

- Institutional data is not used to train AI models — a contractual guarantee from Anthropic.
- Single sign-on (SSO), role-based access and centralised user management for administrators.
- Audit logs and usage analytics, giving the campus full visibility into how AI is used.

- Compliance with international data-protection standards (SOC 2 Type II), suitable for handling student and staff information responsibly.
- Clear acceptable-use controls so the tool can be governed in line with campus policy.

4. Evidence of Productivity Gains

Independent research and Anthropic's own Economic Index (January 2026) report consistent, measurable productivity gains that are highly relevant to a campus environment:

- Approximately 9× faster completion of secondary-school-level tasks and 12× faster on college- and university-level tasks compared to the human average.
- Average task completion time falls from roughly 3.1 hours without AI to about 15 minutes with Claude — close to a 92% reduction in routine work time.
- Independent studies of knowledge-work and coding tools report 26%–55% productivity improvements for regular users.
- Education and library usage is one of the fastest-growing categories on Claude, rising from 9% in January 2025 to 15% in November 2025.
- More than 500 organisations globally are paying over USD 1 million per year for Claude, indicating strong, sustained institutional value.

5. Suggested Rollout at Purwanchal Campus, Dharan

- Phase 1 (Month 1): pilot licences for the Campus Chief's office, ICT cell, examination section and a small group of faculty volunteers.
- Phase 2 (Months 2–3): expansion to all department heads, administrative officers and selected senior faculty.
- Phase 3 (Months 4–12): structured training programme, internal best-practice guidelines and gradual expansion to additional faculty and student-facing services.
- Throughout: monthly review of usage analytics, productivity outcomes and user feedback, reported directly to the Campus Chief.

6. Commercial Summary

Claude AI Enterprise is offered on an annual subscription basis at a standard rate of USD 25 per user per month (approximately NPR 3,845 per user per month at today's exchange rate). Final licensing volume and the resulting budget can be finalised based on the rollout plan approved by the campus management. Detailed pricing and procurement options can be presented separately for review.

I sincerely believe that adopting Claude AI Enterprise will position Purwanchal Campus, Dharan, as a forward-looking institution that uses modern, responsible AI to strengthen teaching, learning, research and administration. I would be most grateful for the opportunity to present a brief demonstration to you and the management team at your convenience.

Thank you for your kind consideration.

Yours sincerely,

Sadanand Paneru

IT Engineer
